Domino Square Year 5 Answers

Ethan, Texas, Andrew from Bandung Independent School in Indonesia wrote:

First, we tried to make 8 on one side of the square, but that didn't work out because the other sides couldn't be 8. We tried swapping dominoes around a few times, but still one side wouldn't add up to 8.

Then, we realized we could flip the dominoes around. The side that was 8 could stay 8, and that helped us to build the other sides.

Working as a group, we solved it quickly! Each one of us could solve one part, and we helped each other put the square together. We were faster than the teacher was!
