

I eat all sorts of small creatures including weasels, rabbits and small birds. Nothing in the woodland eats me.

Foxes sometimes try to eat me. I enjoy eating shrews and other small rodents. I sometimes eat small birds and rabbits.

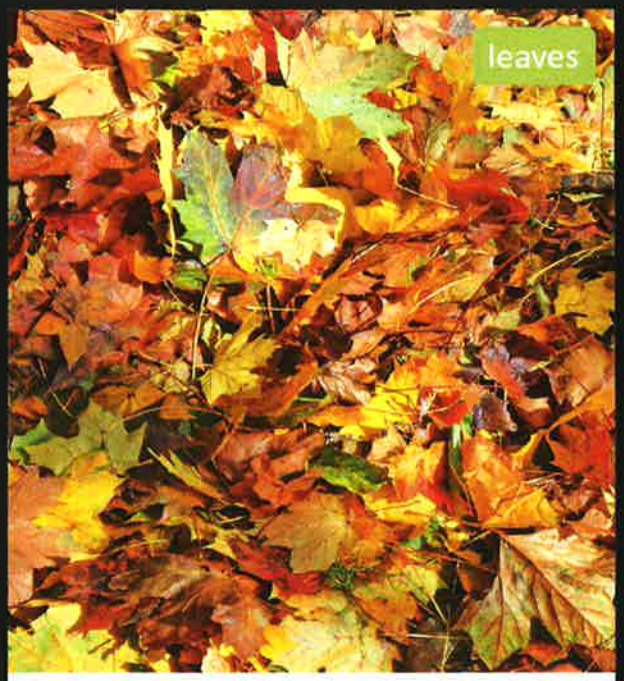

Weasels eat small creatures like me. I prefer to eat worms, snails and slugs.

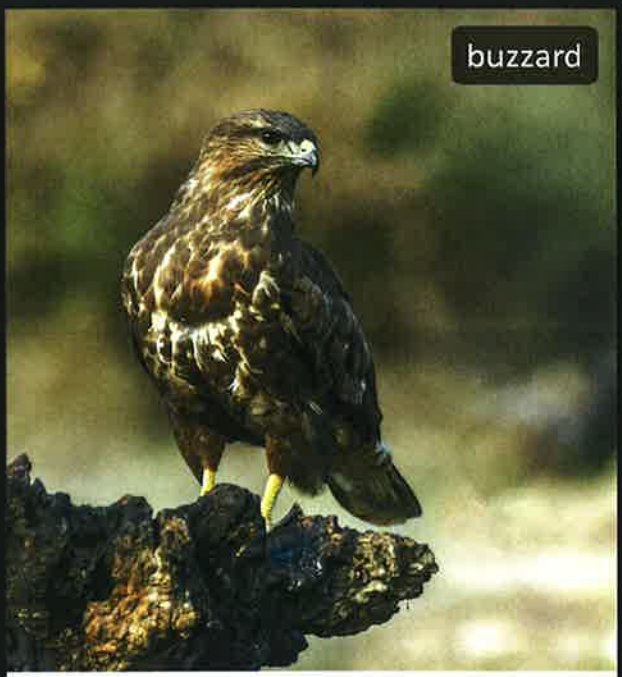

I'm in danger around shrews, as they like to eat worms like me. I eat fresh and decaying roots and leaves.

We're producers, which means that we use sunlight to make our food. Primary consumers such as rabbits and worms like to eat us.

I'm an apex predator, so nothing eats me. I hunt small mammals such as rabbits, and birds such as crows.

Larger birds such as buzzards try to eat me. I eat small animals such as frogs and lizards, or insects.

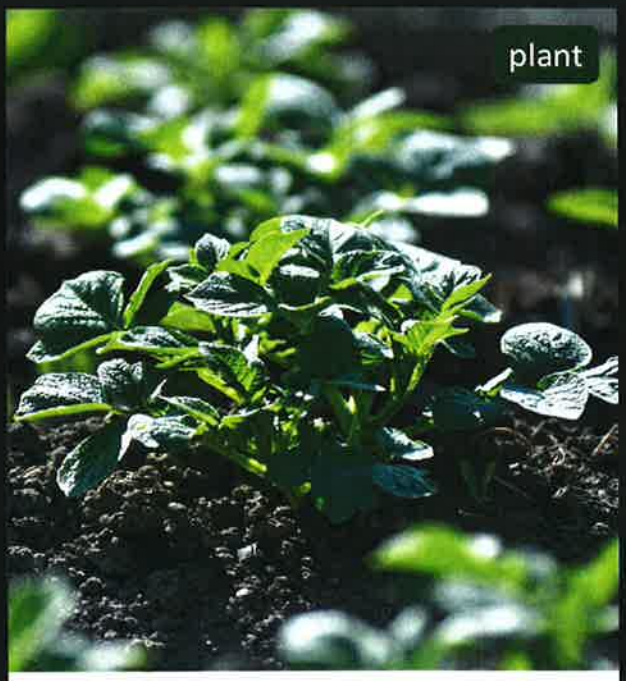

I am a carnivore, which means that I eat meat. I eat snails, worms and insects. Birds such as crows might eat me.

I like to eat green plants and leaves. Sometimes frogs try to eat me.

I am a producer, which means that I use sunlight to make my own food. Snails like to eat different parts of me.

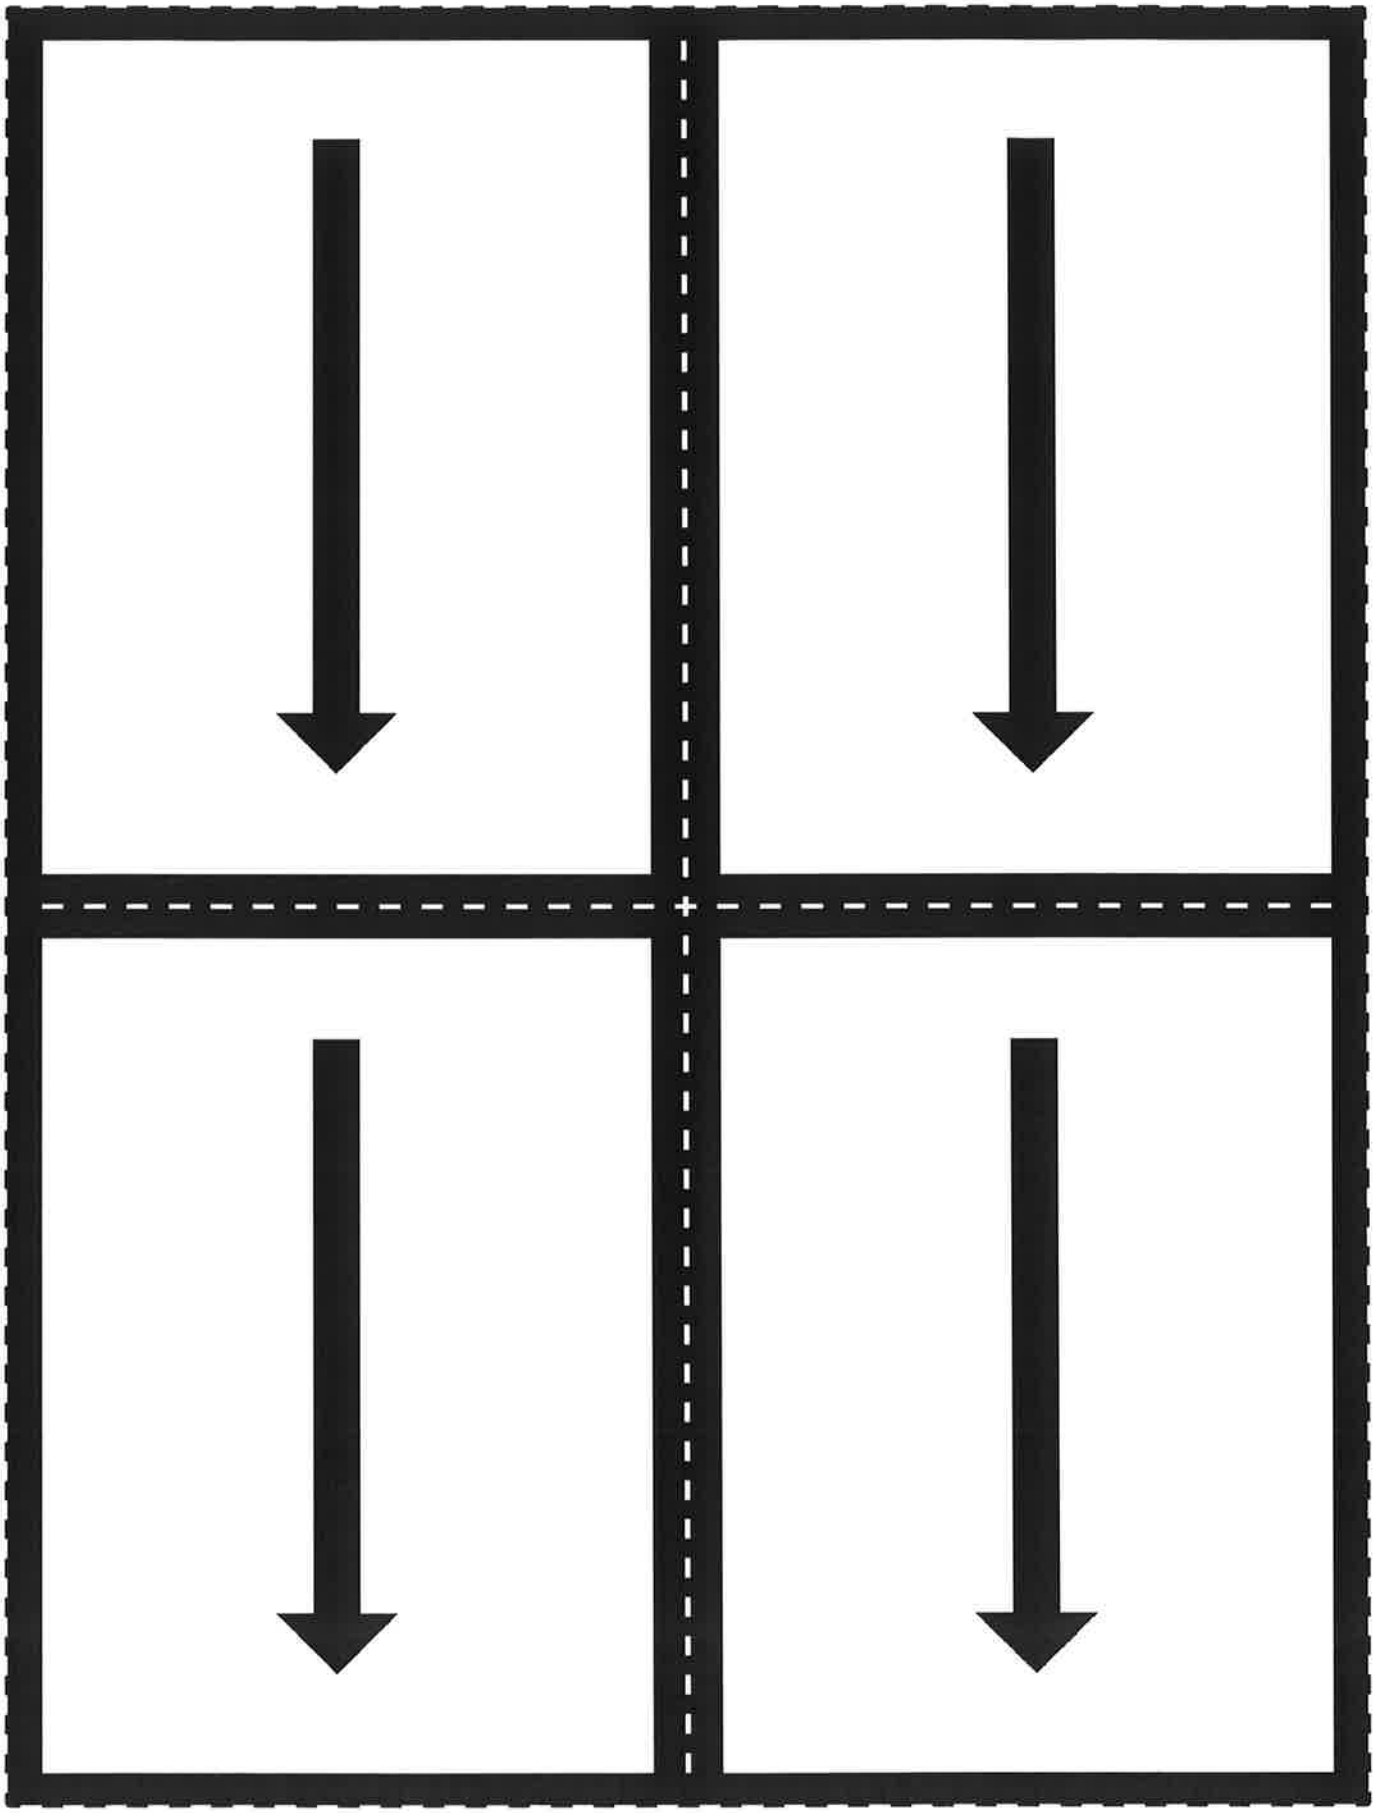

I am an omnivore, so I eat fruits, vegetables and some creatures. I eat leafy greens and insects such as crickets. Crows might try to eat me.

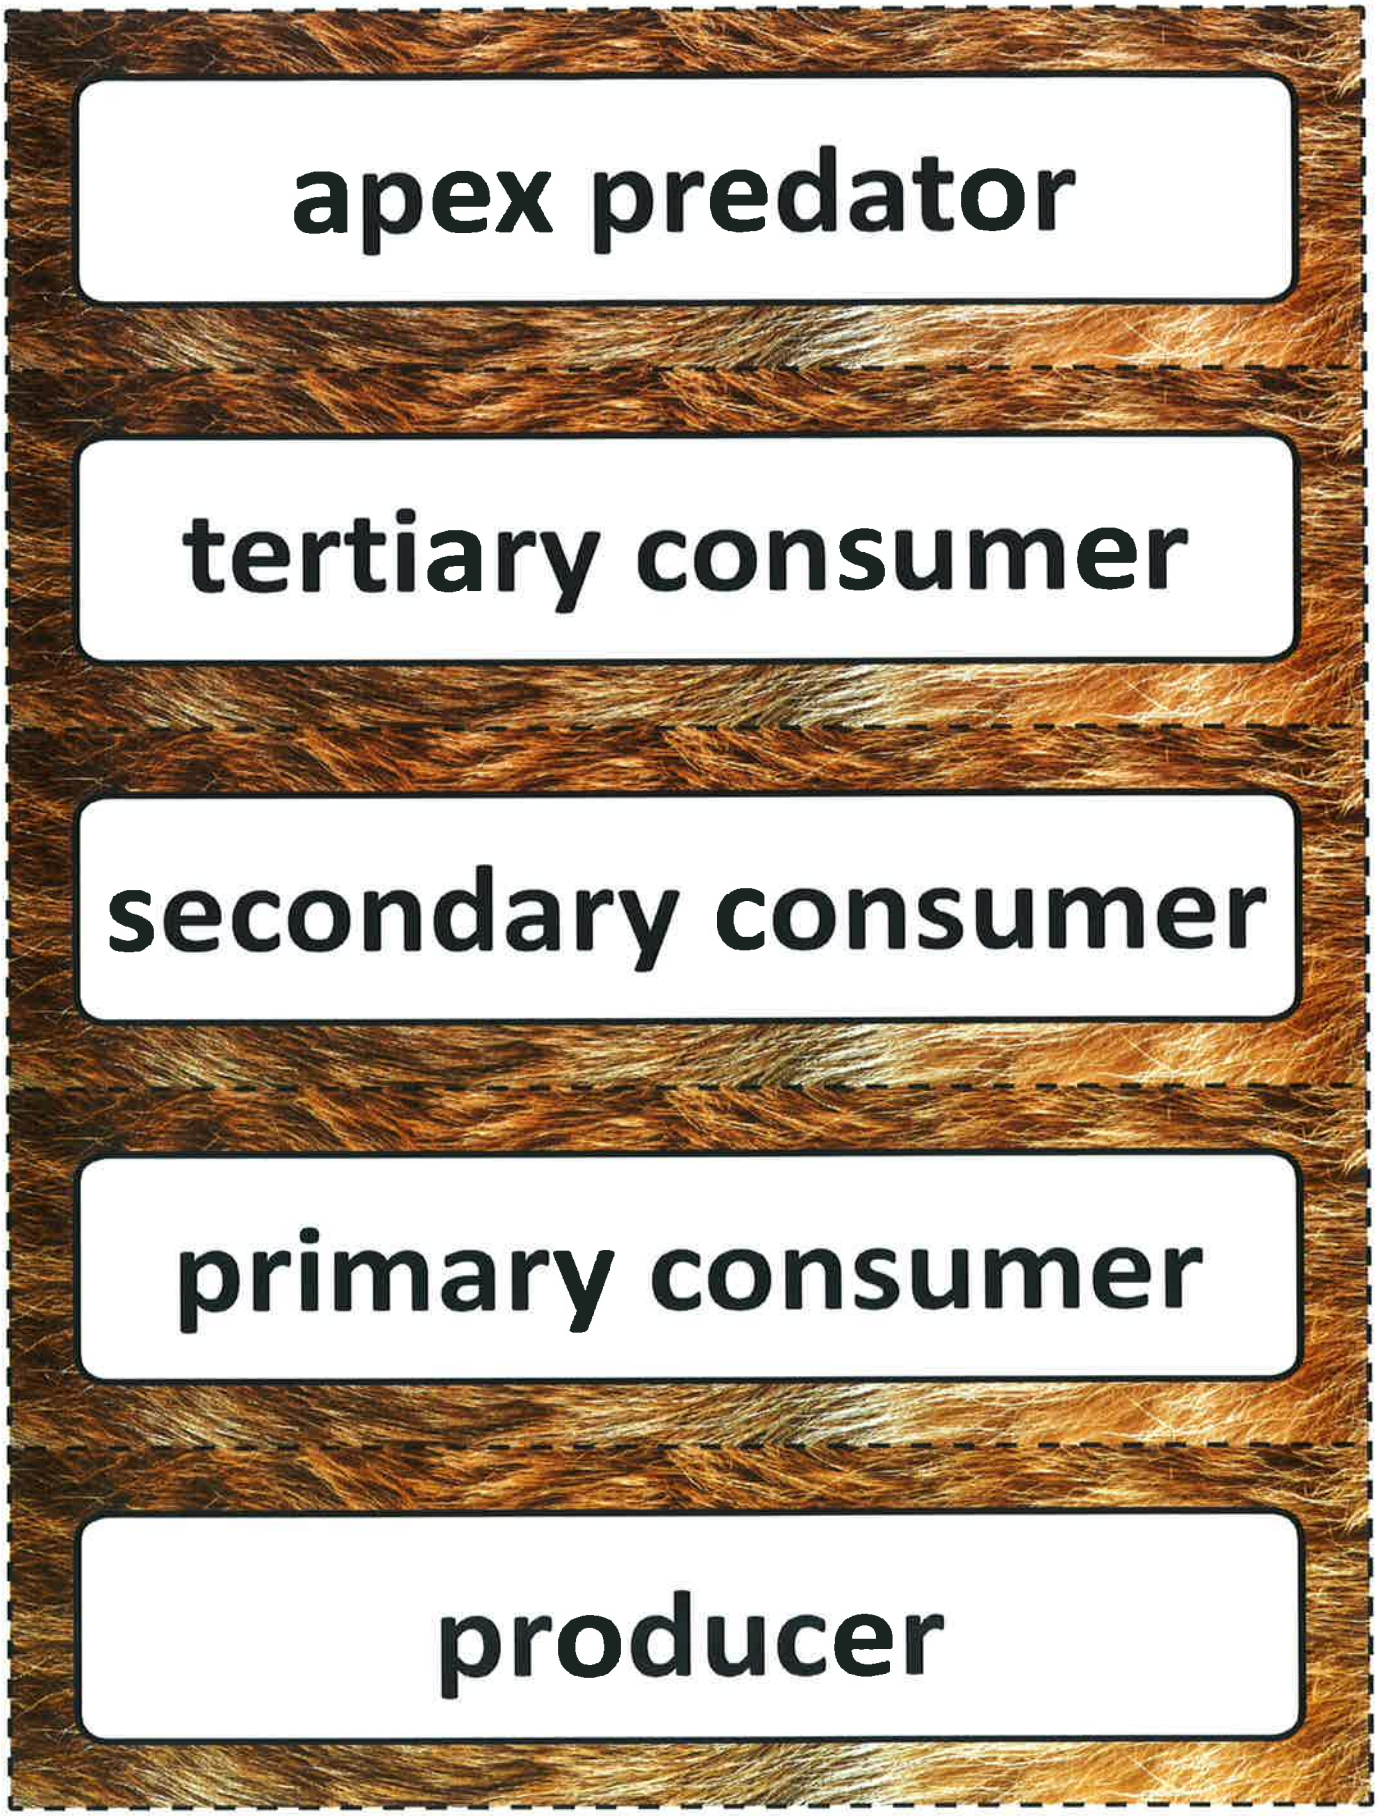

I am a herbivore, so I eat plants, leaves and grasses. Foxes and weasels might try to eat me.

Possible food chains

There are several ways that the food chains can be organised. The children might realise that some food chains are shorter than others, or that some animals might appear in different positions in different food chains.

leaves	→	worm	→	shrew	→	weasel	→	fox
(producer)		(primary consumer)		(secondary consumer)		(tertiary consumer)		(apex predator)

plant	→	snail	→	frog	→	crow	→	buzzard
(producer)		(primary consumer)		(secondary consumer)		(tertiary consumer)		(apex predator)

leaves	→	lizard	→	crow	→	buzzard
(producer)		(primary consumer)		(secondary consumer)		(apex predator)

plant	→	rabbit	→	fox
(producer)		(primary consumer)		(apex predator)

leaves	→	rabbit	→	weasel
(producer)		(primary consumer)		(apex predator)
